1 Introduction

1.1 Disclaimer

This document is a technical guide to usage of the vCatch product and user interface, as of version 3.2.2 at the time of writing. It is not a legal guide to lawful administration of logbooks. Visma accepts no liability for any type of damages incurred due to unlawful logbook management using the vCatch product.

1.2 Objective of vCatch

The vCatch system supports the recording of electronic logbooks as well as storage of and access to the registered logbook information. The system is structured to enter logbook data in the normal order of occurrences on a fishing journey. Only one active logbook can be open at a time (it is possible to create and transmit landing declarations for closed logbooks though).

1.3 About this Document

This document is a user guide to getting started with vCatch and to using vCatch to record logbooks from a vessel.

2 Getting Started

To get started using vCatch, you need to launch the application and enter a few initial preferences (see section 0). Then you will be ready to start entering your first logbook.

2.1 Starting vCatch

The vCatch Vessel Client installer adds a “vCatch” group to the “Programs” item on your system’s “Start” menu, and also places a vCatch shortcut icon on your system’s desktop. To start vCatch, either select it in the Start menu, or simply double-click the vCatch icon on your desktop:

Figure 1, vCatch icon

2.2 Overview Window

Figure 2, Overview window at start-up

The Overview window is the main window in vCatch. It is displayed when you start vCatch and remains available until you close vCatch again. The Overview window is where you create logbook entries, view or edit existing entries, and manage vCatch settings.

The Overview window has the following elements:

- Menus
- Overview of existing and previous logbooks (“Current Trip” and “Previous Trips” tabs)
- Buttons for creating new logbook entries, and for sending and viewing the logbook

2.2.1 Menus

Figure 3, Menu bar

The menus are located in a menu bar in the top left corner of the Overview window. The following menus are available:

- **File:** Provides options for viewing logbooks, and for closing the vCatch application
- **Lists:** Provides options for customizing lists of standard information (see section 4.24.2 Standard Lists)
- **Settings:** Provides access to setting a range of application preferences (see chapter 5)
- **Functions:** Provides options for
 - entering a release key in case there has been a technical problem which prevents you from starting a new logbook (see section 3.2)
 - inspectors to add one or more inspection declarations to the logbook
- **Edit:** Provides options for editing and deleting, as well as entering comments to, logbook entries (the same options are available by right-clicking on an item in the temporary logbook)
- **Help:** Opens an “About” window with information about which version of vCatch you are currently running and functionality to download new lists and software versions

2.2.2 Overview of logbooks

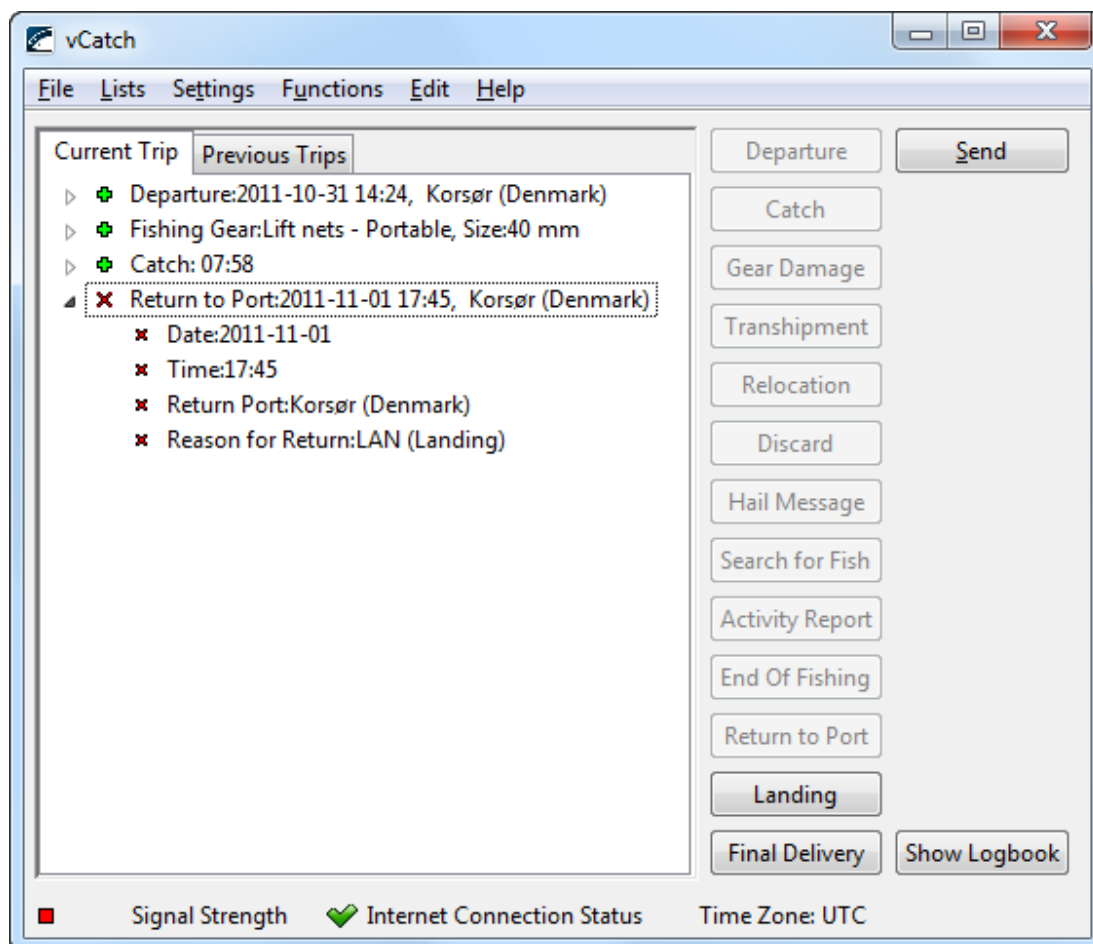

Figure 4, Overview window with temporary logbook

On the “Current Trip” tab, the large area to the left of the column of buttons displays details that have been input for a given point in time. The Logbook is displayed using a hierarchical structure similar to Windows Explorer where it is possible to expand and collapse details that you wish to view (by clicking the minus/plus signs, or pressing the left/right arrow on the keyboard).

Each detail line has a marking to the left that is Red, Blue, Yellow, Green, or Black.

The colours represent:

- ✗ **Red.** The details have not been sent to the Fishery authorities.
- ▲ **Blue.** The details have been delivered to the Inmarsat-C transceiver ready for transmission or have been prepared to be sent via internet.
- **Yellow.** The details have been sent by the Inmarsat-C transceiver or have been sent to the Fishery authorities via internet.
- + **Green.** A receipt has been received from the Fishery authorities
- **Black.** A decline has been received from the Fishery authorities.
It may be due to an illegal action, i.e. sending a new logbook when one handled by the FMC is still open, or a system error may have been detected.
When a logbook has reached this state it can only be unlocked and removed by use of a release key (see section 3.2 for releasing an existing logbook, or see the document “vCatch Fallback Procedures” to read a description of the fallback procedures in vCatch).

For further description of the possible status values of the individual records in the vessel client see the document “Technical Note No. 2 Vessel Client Record Status”.

Right-clicking on a logbook entry (e.g. a catch) opens a menu with options for editing, deleting, or adding a comment to the entry. The same menu can be accessed from the menu described in section 2.2.1 using menu item Edit.

Note that a logbook entry cannot be deleted after pressing the "Send" button.

On the "Previous Trips" tab, a list of previous, incomplete logbooks is shown (see section 3.20).

2.2.3 Buttons

To the right of the Overview window there is a column of buttons. Most of these buttons relate directly to logbook entries. Clicking either of these buttons opens a new window where details for the logbook entry in question can be entered. There is also a "Send" button that sends the logbook, and a "Show logbook" button which shows the logbook in Web Browser (in HTML).

At any time, only logbook entry buttons that can actually be used are available: other buttons are unavailable ("greyed out"). For example, until you have entered departure information, no other information can be logged. Therefore, the buttons for catch, discard, transshipment etc. are all "greyed out". As soon as the departure has been entered, many of these buttons become available, so that it is possible e.g. to enter catches.

Furthermore some of the buttons are configurable and your FMC might have chosen to display fewer buttons.

Clicking the "Send" button sends the logbook to the Fishery authorities: but until a final delivery has been entered (by clicking the "Final Delivery" button, entering data, and clicking "Save"), the logbook remains open for further editing.

2.2.4 Status Line

In the bottom of the Overview window there is a status line indicating the signal strength, the Internet connection status and notifications when:

- new lists are available (see section 6.1)
- new software is available (see section 6.2)
- there are messages in the Inmarsat-C transceiver that is not for vCatch (can be configured and your FMC might have chosen not to display this information).

Figure 5, Notification in the status line

2.3 Defining Initial Value Lists

Figure 6, Accessing vCatch preferences using the menu bar

vCatch has extensive customization options that allow you to set up the application to suit your specific needs. Once you have set it up, entering much of the logbook information required will be a simple matter of picking from a list displaying just the choices that are relevant to you.

However, there is no need to enter e.g. all the ports you expect to ever require up front. All you need to do to get started is to enter a few initial preferences for the port(s), fishing gear, vessel master(s), and vessel(s) you expect to use most frequently.

You can always edit these and other preferences later.

FAO Code	Econ. Zone	Species	Quantity in Kg	Number	Gear

Gear	Position	Date

Figure 7, Accessing preferences while working with logbook entries: click a link to open the preference window you need

The few data you must enter initially once and for all is the standard information you will find by selecting the "Prefilled data" item in the Settings menu (see section 2.3.1).

After that you can just start creating logbook entries and then enter required preferences as you go along (many of the logbook windows provide links to relevant preference settings),

but the easiest way of accessing the preferences may be to use the “Lists” respectively “Settings” menus in the Overview window’s menu bar.

Either way, the following explains the preferences that are mandatory, i.e. that you must enter in order to be able to create and save logbook entries.

2.3.1 Standard Information

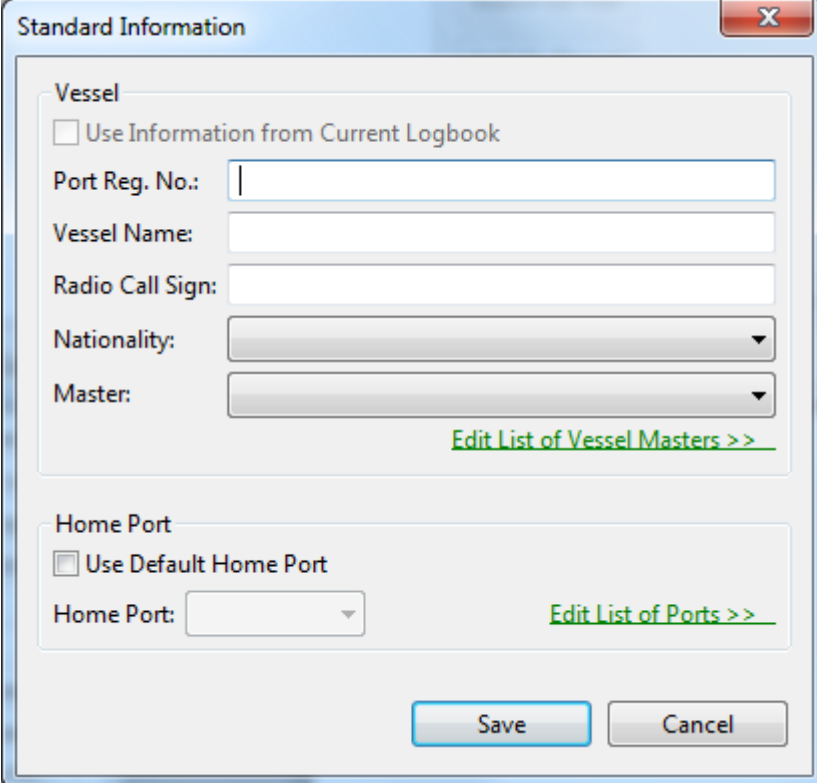

The image shows a software dialog box titled "Standard Information". It has a close button (X) in the top right corner. The dialog is divided into two main sections: "Vessel" and "Home Port". In the "Vessel" section, there is a checkbox labeled "Use Information from Current Logbook". Below it are input fields for "Port Reg. No.", "Vessel Name", and "Radio Call Sign". There are also dropdown menus for "Nationality" and "Master". A green link "Edit List of Vessel Masters >>" is located below the "Master" dropdown. In the "Home Port" section, there is a checkbox labeled "Use Default Home Port" and a dropdown menu for "Home Port". A green link "Edit List of Ports >>" is located to the right of the "Home Port" dropdown. At the bottom of the dialog are "Save" and "Cancel" buttons.

Figure 8, Standard information window

Standard information is information about e.g. vessel details that you will need to enter into the logbook at the start of every fishing journey, and that will often be the same. To enter such standard information, select the “Prefilled data” item in the Settings menu.

Port registration number, the name of the vessel, the radio call sign, and the nationality must be entered in this window and afterwards you will find them prefilled in the Departure window every time you start a new logbook.

The “Use Information from Current Logbook” checkbox is available, when there is an open logbook. When you tick the checkbox the information already entered in the current logbook is copied into the standard information fields.

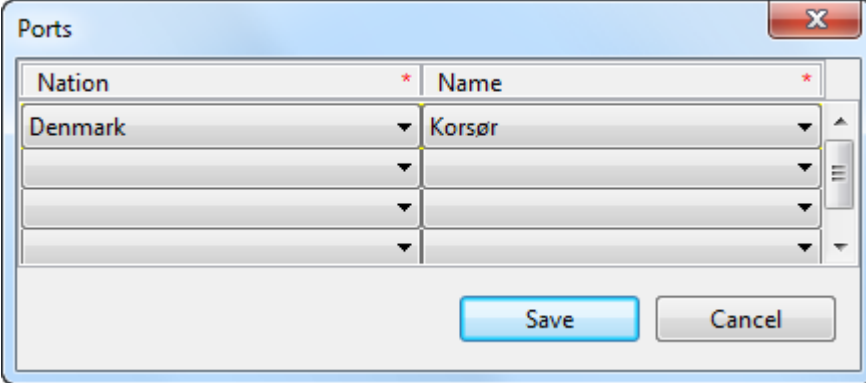

If the logbook master in the current logbook is different from that in the standard information dialog, the standard information dialog is now filled with the logbook master from the current logbook and the fields in the standard information dialog is disabled.

Select “Save” to keep this logbook master as the pre-selected one for the next logbooks.

Select “Cancel” to preserve the logbook master initially selected in the standard information dialog.

2.3.2 Ports

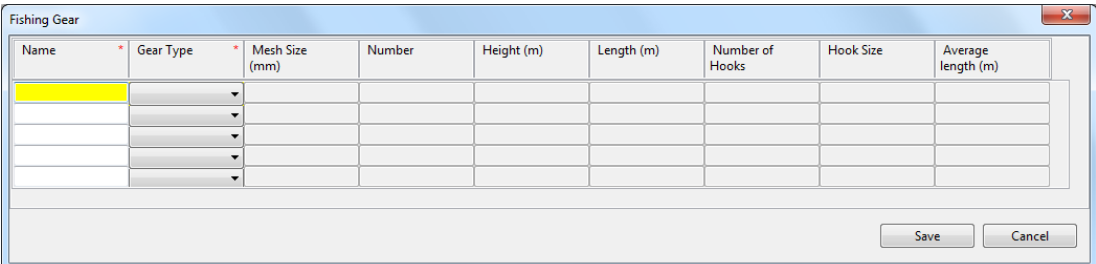

The 'Ports' window is a dialog box with a title bar containing a close button (X). It contains two dropdown menus: 'Nation' and 'Name', both marked with a red asterisk. The 'Nation' dropdown is currently set to 'Denmark' and the 'Name' dropdown is set to 'Korsør'. Below these are three more empty dropdown menus. At the bottom are 'Save' and 'Cancel' buttons.

Figure 9, Ports window

Selection of port details is required when entering e.g. departures, arrivals and landing declarations. To edit port details, select the “Port list” item in the “Lists” menu, then select nation and port name for the ports you expect to dock at.

2.3.3 Fishing Gear

The 'Fishing Gear' window is a dialog box with a title bar containing a close button (X). It contains a table with the following columns: Name, Gear Type, Mesh Size (mm), Number, Height (m), Length (m), Number of Hooks, Hook Size, and Average length (m). The first row is highlighted in yellow. Below the table are 'Save' and 'Cancel' buttons.

Figure 10, Fishing gear window

Entry of fishing gear is necessary in catch registrations, and may be required for some hail messages. To define and maintain the fishing gear used on board, select the “Fishing Gear” item in the “Lists” menu, then enter the details for the fishing gear you expect to use. The specific gear types control which parameters i.e. mesh size, number, height etc. that are to be specified. The parameters belonging to each gear type are defined and controlled by the FMC.

Select gear type to add fishing gear. Select empty gear type to delete existing row.

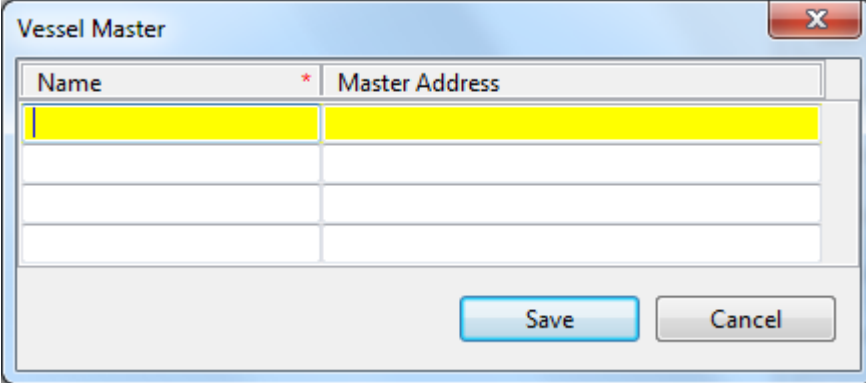

In the “Name” column you must enter a unique name of each fishing gear, e.g. Bacalao 1, Bacalao 2 etc.

Dependent on the chosen “Gear Type” different details are required to enter. In example, “Mesh Size (mm)” and “Number” are required if the “Gear Type” is “Trawls - Bottom”.

The values might differ as well dependent on the “Gear Type”. In the above example “Mesh Size (mm)” means the mesh size of the trawl and “Number” means the number of jibs (if relevant).

2.3.4 Vessel Masters

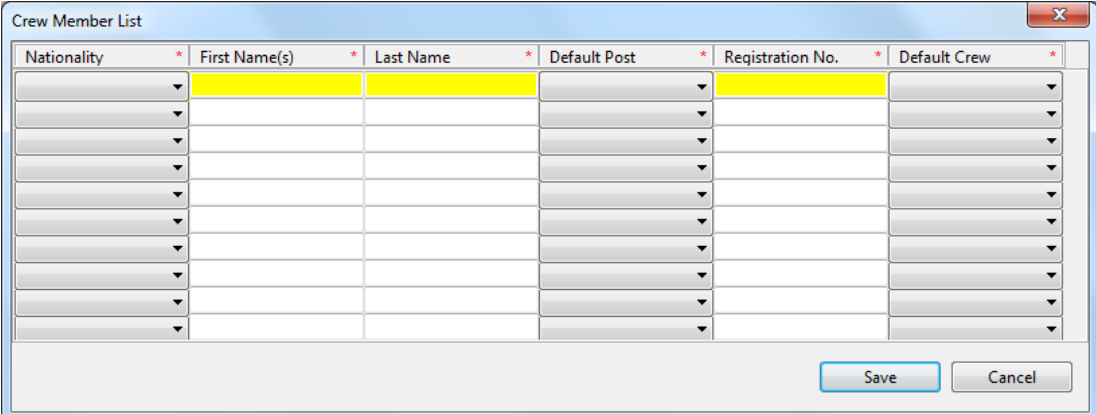

The 'Vessel Master' window is a simple form with a title bar and a close button. It contains two main input fields: 'Name' and 'Master Address', both marked with an asterisk to indicate they are required. Below these fields are three empty rows for additional entries. At the bottom right, there are 'Save' and 'Cancel' buttons.

Figure 11, Vessel masters window

Entry of vessel master is necessary in departure registrations. To edit vessel masters, select the “Vessel Masters” item in the “Lists” menu, then enter the name and address of the master(s) you expect to use (Master Address is configurable and might not be shown).

2.3.5 Crew Member List

The 'Crew Member List' window displays a table with six columns: 'Nationality', 'First Name(s)', 'Last Name', 'Default Post', 'Registration No.', and 'Default Crew'. Each column has a dropdown arrow next to it. The first row is highlighted in yellow. Below the table are 'Save' and 'Cancel' buttons.

Nationality	First Name(s)	Last Name	Default Post	Registration No.	Default Crew

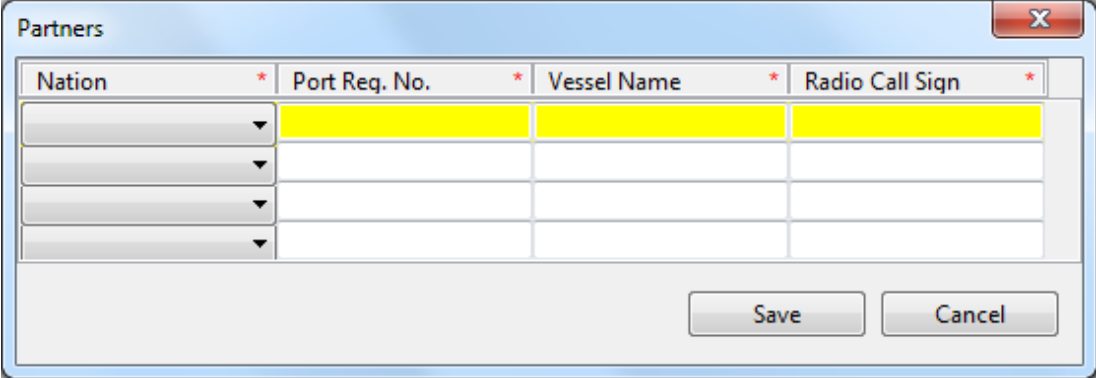

Figure 12, Crew Member List

This crew member list may contain more members than constitutes the current crew on the vessel.

To edit the crew member list, select the “Crew Member List” item in the “Lists” menu (this feature is configurable by the FMC and might not be shown). Then enter the nationality, name, post, and registration number (may vary from country to country, e.g. passport number, CPR number, social security number) of the crew members. Select whether each member is part of the default crew or not. If yes, the crew member will automatically appear in the Crew Manifest list every time you register all the crew members on board on a specific sailing trip (see section 3.9.3.1).

2.3.6 Partners

The screenshot shows a software window titled "Partners" with a close button (X) in the top right corner. The window contains a table with four columns: "Nation", "Port Req. No.", "Vessel Name", and "Radio Call Sign". Each column header has a red asterisk (*) to its right. The first row of the table is highlighted in yellow. Below the table, there are two buttons: "Save" and "Cancel".

Nation *	Port Req. No. *	Vessel Name *	Radio Call Sign *

Figure 13, Partners window

Entry of vessel details is necessary in departure, transshipment, and shift of partner registrations. To edit vessel details, select the "Partners" item in the "Lists" menu, then enter the registration number, radio call sign, and name of the vessel(s) you expect to use.

2.4 Keyboard control

- Use the TAB and arrow keys to set focus on an item in vCatch
- Press either ENTER or SPACE to activate the item (e.g. a button or link)
- F4 opens dropdowns
- Press CTRL+N to enter the current time (relevant in fields like “Departure time” and “Time of final delivery” etc.
- Use ESC to close a window without saving any changes you may have made
- CTRL+S saves the logbook
- ALT+S sends the logbook
- ALT+F4 closes vCatch from the ‘Overview window’

3 Creating Logbooks and Logbook Entries

3.1 Creating a New Logbook

The first time you open vCatch, it has already created a new empty logbook ready for you to use.

If you have an existing (temporary) logbook open, you must first complete it by entering final delivery details (press the “Final Delivery” button in the Overview window), sending the logbook to the Fishery authorities (press the “Send” button in the Overview window), and waiting for the Fishery authorities to return an acknowledgement that the logbook has been received. Once a receipt of the logbook has been acknowledged by the Fishery authorities, the text on the “Send” button changes to “New Logbook”: click this button to start your new logbook. Contact support at the Fishery authorities if there is an undue delay before vCatch is ready to create a new logbook.

3.1.1 Creating Logbook Entries

Once you have created a new logbook, you create new entries by clicking the button corresponding to the entry you need to log – e.g. a catch, a hail message, a landing declaration etc. (Using the keyboard, move to the desired button using the TAB key then press the ENTER or SPACE key).

This opens the editing window for the requested type of entry, where you enter the necessary details. Click “Save” (using keyboard save is done using CTRL-S) to add the information you just entered to the logbook and to return to the Overview window: click “Cancel” (using keyboard the ESC key cancels) to discard the entry and return to the Overview window without making any changes to the logbook.

3.2 Releasing an Existing Logbook

Figure 14, Release logbook window

If you are about to set out to sea on a new fishing journey and a technical problem prevents you from creating a new logbook (i.e. there is no “New logbook” button), vCatch provides a “release” functionality for attempting to solve the problem.

In order to be able to create the new logbook, you must first contact your Fishery authorities and obtain a “release key”: you need to do this “outside” of vCatch, e.g. by phone, fax or e-mail. Once you have obtained the release key, open vCatch, select the “Release Key” item on the “Functions” menu, and enter the release key into the window that appears. When you return to the Overview window, the option to create a new logbook now appears.

If releasing the existing logbook like this does not solve the problem, and you still are not given the option to create a new logbook, you will need to contact your Fishery authorities for further technical assistance.

3.3 Departure

The first thing you need to log in the logbook is departure information (until you have entered departure information, no other information can be logged). To enter departure information, select the “Departure” button in the Overview window.

The departure details describe when the journey started and from which port. The details identify the departure time, date, and port.

Departure

Figure 15, Departure

Departure details:

Departure Information

- Departure date
- Departure time (press Ctrl+n to enter the current time)
- Departure port name

Vessel Identification

- Nationality, Port Registration Number, Vessel Name, and Radio Call Sign are standard information and must be entered and edited by selecting the “Prefilled data” item in the Settings menu from the Overview window
- Master
- Master Address (configurable)

Anticipated Activity

- Anticipated activity (configurable). May be fishing, cruising, transshipment, relocation, scientific research, guard ship duty or other non-fishing activities.

- Anticipated Effort Zone (configurable)
- Onboard Gear (configurable)

Onboard catch

- If there is any catch onboard from a previous journey this may be declared: tick the checkbox marked "Onboard catch from prior journey" then fill in the catch details.
- FAO Code. Waters where the catch was made
- Economical zone for the body of water where the catch was made
- Species of fish
- Processing (configurable)
- Quantity in Kg
- Number
- Gear (configurable)

Gear at Sea

It is possible to specify outstanding gear types (configurable). Select the 'Edit or add Gear at Sea' link to the right.

- Gear
- Position
- Date

Once the departure information is saved the window is closed and the 'Overview window' is updated with the new logbook and the departure information.

3.4 Catch

To register catch information select 'Catch' in the 'Overview window'. Catch has 4 tabs to register catches, as explained in detail below (it can be configured and your FMC might have chosen to display fewer tabs and/or fewer input fields). Click on the relevant tab (using keyboard use TAB to activate the tabs and use right and left arrows to select the tabs).

3.4.1 Catch Information

Figure 19, Catch with passive gear

Haul with passive gear information:

Fishing Gear Information

- Fishing Gear. The fishing gear used
- Number (configurable). Number of passive fishing gear (can be configured and your FMC might have chosen not to display this information)
- Depth
- Gear lost
- Number of Units. The number of passive fishing gear if gear has been lost
- Salvage Attempt (configurable). What has been done to salvage the gear

Catch Date and Time

- Date when the passive fishing ended (when using the 'Get Date' function the associated position, if any, is automatically filled in as well)
- Time when the passive fishing ended (press Ctrl+n to enter the current time)
- Duration. Soak time of the gear (number of hours)

Position

- Catch position is entered as statistical rectangle e.g. 40G6 and/or as a position in latitude and longitude (the associated date is automatically filled in as well if the 'Get Position' function is used) (configurable).
- FAO Code (configurable)

- Economical zone (configurable). The nation the fishing area belongs to. This should be EEC for EU-zone, NOR for Norway or INT for International waters.

Catch information.

- No catch. If there is no catch onboard select the “No catch” checkbox
- Species. Either type in the three letter FAO fish species code or select the species from the dropdown
- Processing (configurable)
- Quantity in Kg
- Number
- Discard (configurable)

3.5 Gear Damage

This section details gear damage recording. Select 'Gear Damage' in the 'Overview window' (this feature is configurable by the FMC and might not be shown).

Figure 20, Gear damage

Gear damage information:

- Fishing Gear. The damaged fishing gear
- Damage cause
- Gear count. Detail the number of damaged gears
- Date and time of gear damage (press Ctrl+n to enter the current time)
- FAO Code (configurable)
- Economical zone (configurable). The nation the FAO Code belongs to. This should be EEC for EU-zone, NOR for Norway or INT for International waters etc.

3.6 Transshipment

This section details transshipment at sea. Select 'Transshipment' in the 'Overview window'. The window has a "Donor" tab for registration of catch that you *transfer* to another vessel, and a "Recipient" tab for registration of catch that you *receive* from another vessel: start by selecting the tab that is correct for the type of transshipment you wish to register.

FAO Code	Econ. Zone	Species	Processing	Quantity in kg	Number	Freshness Category	Preservation	Presentation	Type of Packaging	Number of Packing Units	Avg. Weight per Unit	Gear Type	Conversion Factor

Figure 21, Transshipment – Donor tab

FAO Code	Econ. Zone	Species	Processing	Quantity in kg	Number	Freshness Category	Preservation	Presentation	Type of Packaging	Number of Packing Units	Avg. Weight per Unit	Gear Type	Conversion Factor

Figure 22, Transshipment – Recipient tab

Transshipment details:

Transshipment date and place

- Date and time of transshipment (press Ctrl+n to enter the current time)
- Entry of the location of the transshipment, either as a location at sea or as a port, is required: select the option you want by clicking either the "Transshipment at sea" or "Transshipment in port" radio button. Depending on your selection here, either the fields in the "Transshipment at sea" or the "Transshipment in port" sections will be made available.

Transshipment at sea

- Position in latitude and longitude (the associated date is automatically filled in as well if the 'Get Position' function is used) (configurable).
- FAO Code (configurable)
- Economical zone (configurable). The nation the fishing area belongs to. This should be EEC for EU-zone, NOR for Norway or INT for International waters.

Transshipment in port

- Port

Transshipment to/from

- Vessel details of the second vessel involved in the transshipment that is either received from or delivered to
- Recipient return port (configurable)

Transshipped catch

- FAO code, Economical zone, Species, Processing, Quantity in kg, Number, Freshness category, Preservation, Presentation, Type of packaging, Number of packing units, Average weight per unit, Gear type, and Conversion factor (this information can be configured and your FMC might have chosen only some of them).

By activating the "Populate" button on the Donor tab you will see your onboard catch. By selecting one or more of the catches and then selecting the "Populate" button the data will automatically be copied to the Transshipped Catch table.

Figure 23, Onboard catch

3.7 Relocation

Relocation is used when a catch (or part of it) is transferred from a shared (possibly many partners) fishing gear to a vessel. The vessel taking the catch onboard treats this as a catch. Other vessels register the catch as relocation.

Relocation is also used when a catch is transferred from a vessel's hold or fishing gear to a keep net container or cage (outside the vessel) in which the live catch is kept until landing. Select 'Relocation' in the 'Overview window'.

The window has a "Donor" tab and a "Recipient" tab. Start by selecting the tab that is correct for the type of relocation you wish to register.

The donating tab is used in the following two scenarios:

- 1) When catch is transferred from hold or fishing gear to keep net, container, barge or cage (outside the vessel). In this scenario there is no receiving vessel.
- 2) When catch is transferred or moved from shared fishing gear to another vessel. In this scenario the receiving vessel must be specified.

The recipient tab is used in the following scenarios:

- 1) When catch is taken aboard from shared fishing gear.
- 2) When catch is taken aboard from keep net, container, barge or cage (outside the vessel). Note that this declaration is not part of the ERS logbook declaration and thus cannot be exchanged between FMCs.

When catch is taken aboard from shared fishing gear the donating vessel(s) must be specified. Depending on FMC configuration this can be specified in either a single field or as a list of partnering vessels.

Figure 28, Onboard catch

3.9 Hail Message

This section details communication in relation to a Fishery authority. Select 'Hail Message' in the 'Overview window'.

In vCatch it is possible to create hail messages for use in Norwegian and EU waters respectively. Hail messages are always sent to the flag state but will be forwarded to either Norway or the EU coastal member state in accordance with the regulations. The dialog is divided into 3 tabs, one for selecting EU hail messages, one for selecting Norwegian hail messages, and one called "Other" which contains the crew manifest (can be configured and your FMC might have chosen only some of the tabs):

Figure 29, The three hail message tabs: EU, Norway, and Other

Choose the type of message from the drop down list. Depending on the message type different information is necessary.

In general the hail message dialogs will be prefilled with as much data as possible from the logbook. An example is the Norwegian DCA hail message where fishing activities since last relevant hail message automatically will be included. Further the onboard catch is calculated and shown where ever relevant such that it is not needed to specify this.

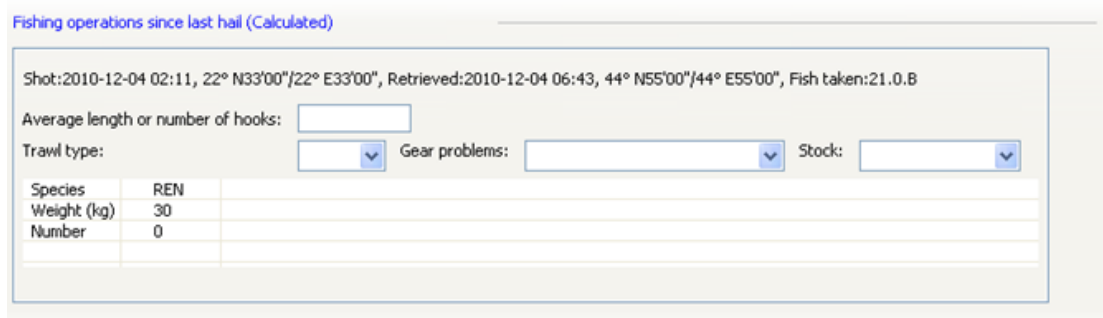

Figure 30, Prefilled catch information in the hail message

vCatch checks if any information for the chosen message is missing and requests for missing information before sending the message. Remember to send the message using the Send button (in the 'Overview window').

3.9.1 EU

3.9.1.5 Transzonal fishing (TRZ)

Because of ambiguity related to the use of the transzonal hail message and specifically what information is required this type is not supported in vCatch 3.2.

3.9.2 Norway (CREWS messages)

All the hail messages listed under the “Norway” tab will automatically be exchanged to the Norwegian FMC (CREWS format).

The screenshot shows a window titled "Hail Message" with three tabs: "EU", "Norway", and "Other". The "Norway" tab is selected and circled in red. Below the tabs, there is a label "Hail Message Type:" followed by a dropdown menu. The dropdown menu is open, showing a list of options: "Audit report (CREWS_AUD)", "Control point/area (CREWS_CON)", "Departure (CREWS_DEP)", "Detailed Catch Activity (CREWS_DCA)", and "Entry in zone (CREWS_COE)". A mouse cursor is pointing at the dropdown arrow. There is a red asterisk next to the dropdown menu.

Figure 37, Norway tab

See section 3.9.2.9 and 3.9.2.10 for correction and cancelling of CREWS messages.

3.9.2.1 Audit report (CREWS AUD)

The Audit report is used to test the connection between vessel and FMC.

The screenshot shows the same "Hail Message" window with the "Norway" tab selected. The "Hail Message Type:" dropdown menu is now set to "Audit report (CREWS_AUD)". Below this, there is a label "Audit report" in blue text, followed by a horizontal line. Below that, there is a label "Free text:" followed by a text input field. There is a red asterisk next to the input field. At the bottom right of the window, there are two buttons: "Save" and "Cancel".

3.9.2.4 Detailed Catch Activity (CREWS DCA)

This hail message is used to specify the catch activity of the vessel.

The screenshot shows a 'Hail Message' dialog box with a title bar containing a close button. Inside, there are three tabs: 'EU', 'Norway' (selected), and 'Other'. Below the tabs, the 'Hail Message Type' is set to 'Detailed Catch Activity (CREWS_DCA)' with a red asterisk. The main area is titled 'Detailed Catch Activity Report' and contains two dropdown menus: 'Activity:' and 'Partner vessel:'. To the right of these are two green links: 'Edit List of Vessel Activities >>' and 'Edit List of Vessels >>'. Below the dropdowns is a label 'Fishing operations since last hail (Calculated)' followed by a large empty text area. At the bottom right are 'Save' and 'Cancel' buttons.

3.9.2.8 Transhipment report (CREWS TRA)

This hail message is used when a vessel is taking part in transhipment at sea in Norwegian waters.

The screenshot shows a software window titled "Hail Message" with tabs for "EU", "Norway", and "Other". The "Norway" tab is selected. Inside the window, the "Hail Message Type" is set to "Transhipment report (CREWS_TRA)". Below this, there is a section for "Transhipment report" with fields for "Transhipment type", "Transhipment date" (Year: 2011, Month: 10, Day: 18), "Transhipment time", "Position" (Latitude and Longitude), "Transhipment port", and "Transhipped to/from (Radio-call-sign)". There are also buttons for "Get Date" and "Get Position". Below these fields is a table for "Quantity on board (Calculated)" with columns for "Species", "Weight (kg)", and "Number". At the bottom, there is a section for "Catch to be on-loaded or off-loaded" with a table for "Species", "Quantity in Kg", and "Number". The window has "Save" and "Cancel" buttons at the bottom right.

Figure 45, Transhipment report hail message - Norway

Transhipment report hail message details:

- Transhipment type
- Transhipment date (when using the 'Get Date' function the associated position, if any, is automatically filled in as well)
- Transhipment time (press Ctrl+n to enter the current time)
- Position as latitude and longitude (the associated date is automatically filled in as well if the 'Get Position' function is used)
- Transhipment port
- Transhipped to/from (Radio-call-sign)
- Catch to be on-loaded or off-loaded

3.9.2.9 Correction of CREWS messages

The vessel client allows for correction of relevant CREWS hail messages which includes DCA, POR and TRA. In the agreement between Norway and the EU commission this is described as:

- DCA: Must be sent every day before 23.59 UTC. May be corrected until 12.00 UTC the day after
- POR: Must be sent 2 hours before entering the port. May be corrected or cancelled.
- TRA: Donor vessel must send 24 hours before transshipment. Receiving vessel must send no later than 1 hour after transshipment. May be corrected or cancelled.

The vessel client does not prevent later correction of for instance a DCA and it is thus up to the logbook master to adhere to the relevant legislation.

Below an open logbook is shown, illustrating a Danish fishing vessel currently fishing in Norwegian waters. As can be seen, the logbook so far consists of a Departure, CREWS Entry in Zone (COE), one Catch and then a CREWS Detailed Catch Activity (DCA). All records have been sent to the vCatch server which has replied indicated by the 'green' status.

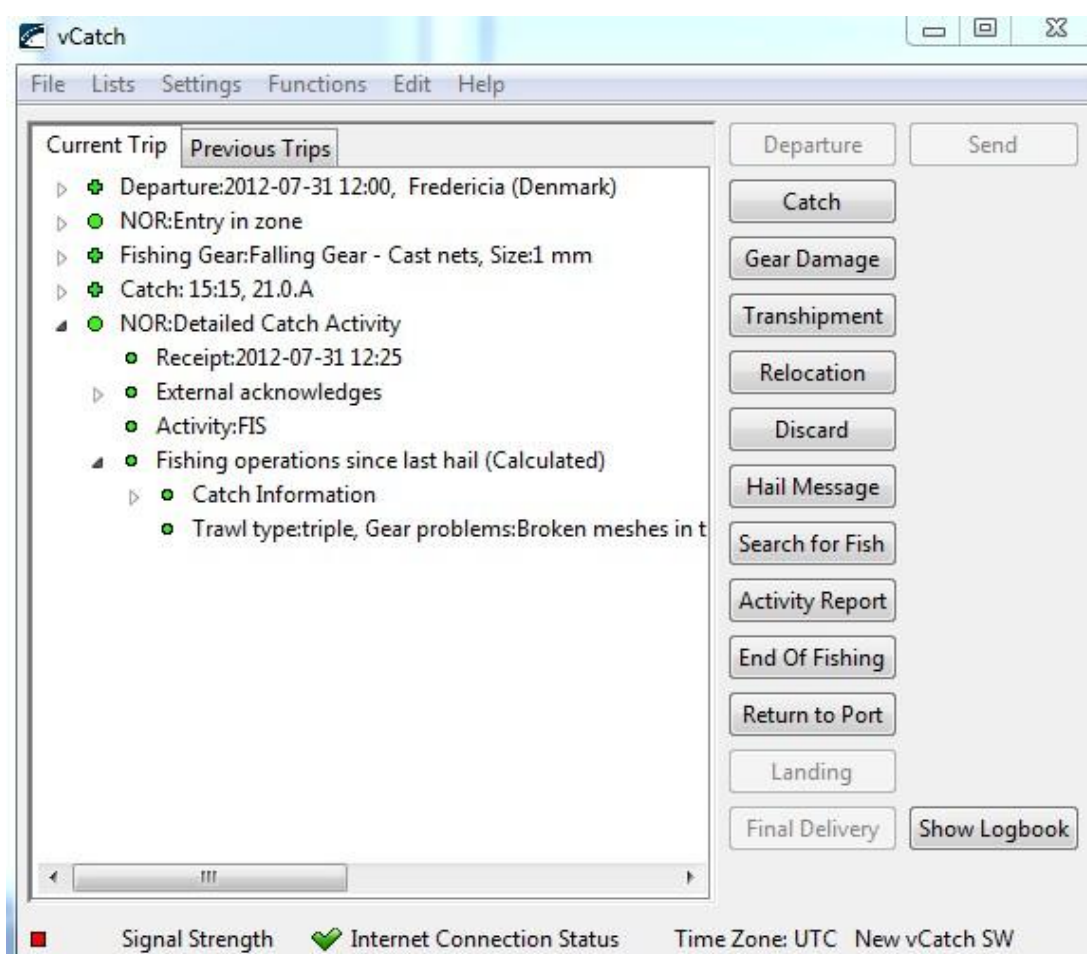

Figure 46, Correction of CREWS message, Illustration 1 – open logbook with e.g. catch and DCA

Now, the DCA record can be edited by right-clicking on the record and then selecting 'Edit'. Doing this results in the dialog shown below. As the catch activity partly is calculated by the vessel client it is not all information that can be edited directly from this client dialog. But it will be possible to for instance change the activity, add a partner vessel or add/change attributes like gear length/number of hooks, trawl type, gear problems and stock. To change one or more of these values enter the desired values and press the 'Save' button. Now, the DCA record will appear as unsent in the main window, i.e. status 'Red' and can thus be resent by pressing the 'Send' button.

Figure 48, Correction of CREWS message, Illustration 3 – catch has been edited

The belonging DCA will not automatically reflect the changes introduced in the Catch. To do this the DCA must also be edited and if the calculated catch is correct the 'Save' button is pressed. This will result in the situation illustrated next.

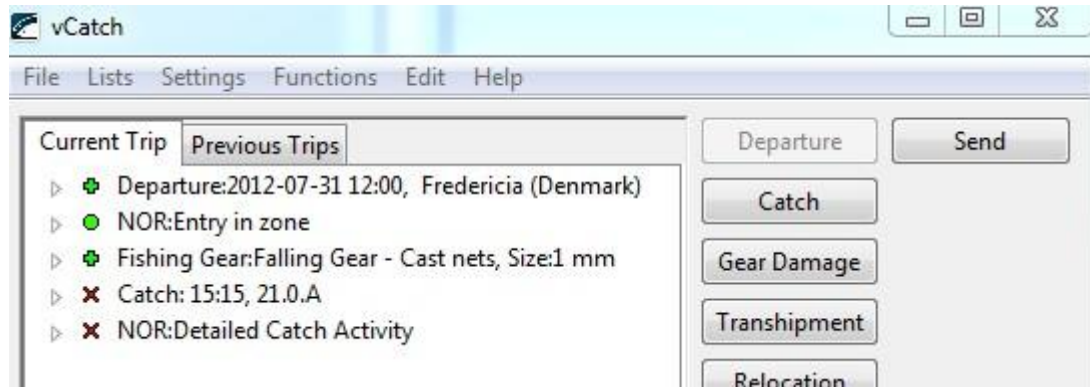

Figure 49, Correction of CREWS message, Illustration 4 – DCA has been edited

As it appears from the figure above both the Catch and DCA records are changed and pressing the 'Send' button will transmit the changed records to the FMC. It is important to note, that by just changing and sending one or more Catch records without also updating the DCA not will trigger any DCA changes at the local authority and for this reason no correction will be sent to Norway.

Figure 50, Correction of CREWS message, Illustration 5 – a new catch has been added

It is not possible to include a new Catch record to an already send DCA. So to add a new Catch a Catch record must be added followed by another DCA. In the figure above a Catch record is added as the next record after the previously sent Catch and DCA.

As stated previously it must also be possible to edit transhipment and port hail messages. As with DCA hail messages these hail messages can be edited by right-clicking the belonging records and then selecting the 'Edit' menu.

3.9.2.10 Cancelling of CREWS messages

Not supported in the current version of vCatch client.

3.9.3 Other

Hail Message

EU Norway **Other**

Hail Message Type: Crew Manifest (OTHER_CREW) *

Figure 51, Other tab

3.9.3.1 Crew Manifest

The crew manifest is used to report to the FMC who form the crew for the current sailing trip (this can be configured and your FMC might have chosen not to display this information)

[Edit Crew Member List >>](#)

Save Cancel

Figure 52, Crew Manifest

Crew Manifest details:

- Crew Member (created and maintained in the Crew Member List under the List menu – see section 2.3.5)
- Post
- Date of Embarkation (the start date for the crew member)
- Date of Discharge

3.10 Search for Fish

In this section it is possible to specify when the vessel starts to search for fish (this feature is configurable by the FMC and might not be shown). Select 'Search for Fish' in the 'Overview window'.

Search for Fish

Start Search Time, Position and Target Species

Date: Year: 2011 - Month: 11 - Day: 01 * Time: : 00 * **Get Date**

Position: Latitude: ' ' N Longitude: ' ' E **Get Position**

Target Species: [Dropdown]

End Search Time and Position

Date: Year: 2011 - Month: 11 - Day: 01 * Time: : 00 * **Get Date**

Position: Latitude: ' ' N Longitude: ' ' E **Get Position**

Save **Cancel**

Figure 53, Search for Fish

Search for fish details:

Start Search Time, Position, and Target Species

- Date and time for the start of searching for fish
- Position for the start of searching for fish as Latitude and Longitude (configurable)
- Target Species (configurable)

End Search Time and Position

- Date and time for the end of searching for fish
- Position for the end of searching for fish as Latitude and Longitude (configurable)

When using the 'Get Date' function the associated position (if any) is automatically filled in as well. Similarly the associated date is automatically filled in if the 'Get Position' function is used.

3.11 Activity Report

This section details the sending of activity reports (this feature is configurable by the FMC and might not be shown). Select 'Activity Report' in the 'Overview window'.

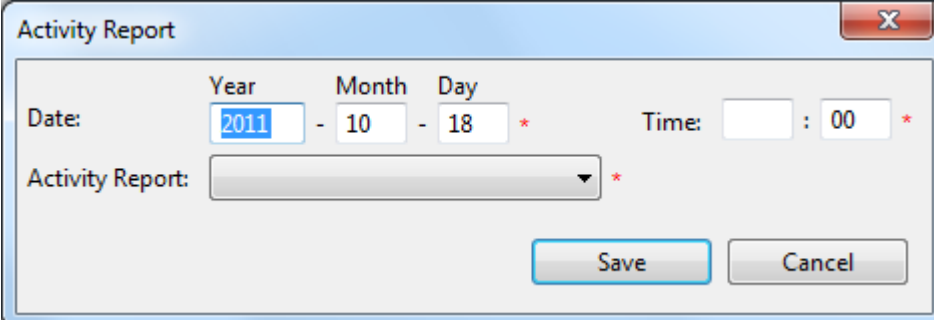

The 'Activity Report' dialog box has a title bar with a close button (X). It contains a 'Date:' label followed by three input fields for 'Year', 'Month', and 'Day', separated by hyphens. The 'Year' field is highlighted with a blue border and contains '2011'. The 'Month' field contains '10' and the 'Day' field contains '18'. To the right of these fields is a red asterisk. Next to the date fields is a 'Time:' label followed by two input fields for hours and minutes, separated by a colon, with '00' in the minutes field. To the right of the time fields is another red asterisk. Below the date and time fields is an 'Activity Report:' label followed by a dropdown menu. To the right of the dropdown is a red asterisk. At the bottom right are 'Save' and 'Cancel' buttons.

Figure 54, Activity report

Activity report details:

- Date and time for the message (press Ctrl+n to enter the current time)
- Activity Report. The message you wish to send

3.12 End of Fishing

This section details the sending of end of fishing declarations

After your final fishing operation and before returning to port you can transmit an 'End of Fishing'-declaration.

Select 'End of Fishing' in the 'Overview window'.

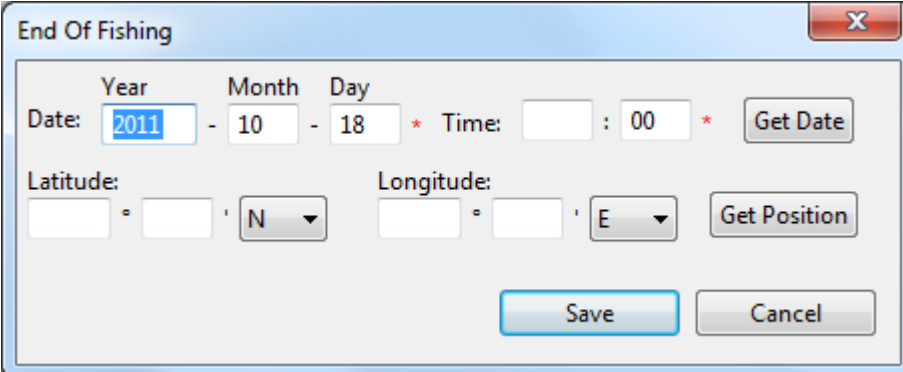

The 'End Of Fishing' dialog box has a title bar with a close button (X). It contains a 'Date:' label followed by three input fields for 'Year', 'Month', and 'Day', separated by hyphens. The 'Year' field is highlighted with a blue border and contains '2011'. The 'Month' field contains '10' and the 'Day' field contains '18'. To the right of these fields is a red asterisk. Next to the date fields is a 'Time:' label followed by two input fields for hours and minutes, separated by a colon, with '00' in the minutes field. To the right of the time fields is another red asterisk. To the right of the time fields is a 'Get Date' button. Below the date and time fields are 'Latitude:' and 'Longitude:' labels. Each label is followed by two input fields for degrees and minutes, and a dropdown menu for direction (N or E). To the right of the longitude dropdown is a 'Get Position' button. At the bottom right are 'Save' and 'Cancel' buttons.

Figure 55, End of Fishing

End of Fishing details:

- Date and time when the final fishing operation finished (press Ctrl+n to enter the current time)
- Position as Latitude and Longitude (configurable)

When using the 'Get Date' function the associated position (if any) is automatically filled in as well. Similarly the associated date is automatically filled in if the 'Get Position' function is used.

It is configurable whether it is possible to enter new catch information once an End of Fishing has been entered or not.

Deletion of an End of Fishing declaration is not supported by vCatch.

3.13 Inspection Declarations

When an inspection is carried out on-board the vessel the inspector can add one or more inspection declarations to the logbook (can be configured and your FMC might have chosen not to display this information).

To enter inspection declarations, select “Register Inspection” in the “Function” menu (this feature is configurable by the FMC and might not be shown). Note that this function is only permitted for the authorities/inspectors and not the vessel master.

Figure 56, Inspection Declaration

Inspection declaration details:

- Check to verify. Until this check-box is checked, the rest of the fields are disabled
- Inspection date
- Inspection time (press Ctrl+n to enter the current time)
- Country of inspection
- Assigned inspector (4 digit number identifying the inspector)
- Country of inspector
- Port of inspection
- Inspection position entered as a position in latitude and longitude

Once the inspection declaration is saved the window is closed and the ‘Overview window’ is updated with the new information.

As soon as an inspection declaration is sent it is not possible to edit it anymore.

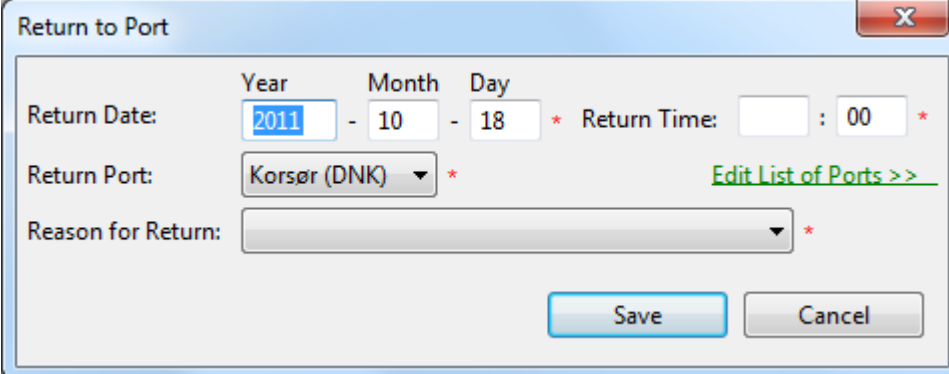

3.14 Return to Port

On entry into port (and before any landing activity) the Fishery Authorities must be notified.

Select 'Return to Port' in the 'Overview window'.

Once selected the 'Return to Port' window will open.

The 'Return to Port' dialog box is shown. It has a title bar with a close button (X). The form contains the following fields:

- Return Date:** A date picker with three boxes for Year (2011), Month (10), and Day (18). There are hyphens between the boxes and a red asterisk to the right.
- Return Time:** Two boxes for hours and minutes, currently showing ': 00', with a red asterisk to the right.
- Return Port:** A dropdown menu showing 'Korsør (DNK)' with a red asterisk to the right. A green link 'Edit List of Ports >>' is to the right of the dropdown.
- Reason for Return:** A dropdown menu with a red asterisk to the right.

At the bottom right are two buttons: 'Save' and 'Cancel'.

Figure 57, Return to port

Return to port information:

- Return Date and Time (press Ctrl+n to enter the current time)
- Return port
- Reason for Return

Once the information is saved the window is closed and the 'Overview window' is updated.

The transport declaration opens in a new tab and each new tab contains a transport document.

Figure 60, Transport declaration

Transport declaration information:

- Place of destination. Either a standard vCatch port code or a UN LOCODE in the format CC PPP, e.g. 'DE BER'.
- Registration number vehicle
- Date of loading
- Place of loading. Either a standard vCatch port code or a UN LOCODE (format CC PPP, e.g. 'DE BER').
- Name of consignee(s). One or more names of the consignee(s) of the load.
- Address of consignee(s)
- Catch to be transported. If the catch to be transported is already specified in the landing declaration just select the checkbox "Use catch entirely as specified under landing".

If it is not already specified in the landing declaration fill in the details: FAO code, Economical zone, Species, Processing, Quantity in kg, Number, Freshness category, Preservation, Presentation, Type of packaging, Number of packing units, Average weight per unit, Vessel ID, Gear type and Conversion factor (this information can be configured and your FMC might have chosen only some of them).

By activating the "Populate" button you will see your onboard catch. By selecting one or more of the catches and then selecting the "Populate" button the data will automatically be copied to the Catch table.

Figure 61, Onboard catch

To delete a transport document tab again select "Remove this transport declaration" button.

3.16 Final Delivery

This section details information about the final delivery. Select 'Final Delivery' in the 'Overview window'.

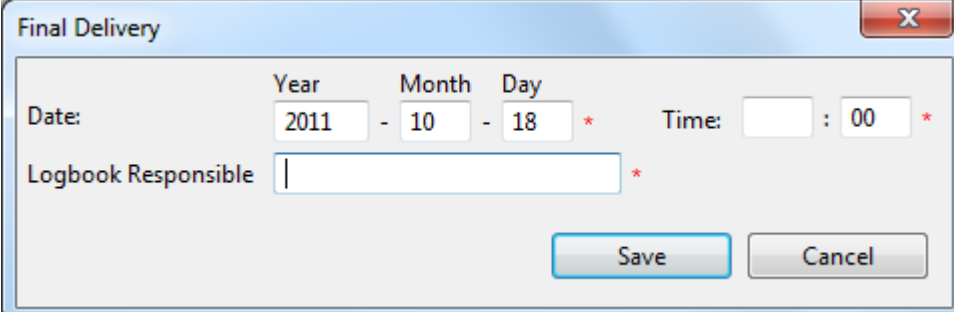

A dialog box titled "Final Delivery" with a close button (X) in the top right corner. It contains a date field with labels "Year", "Month", and "Day" above the input boxes, which are currently set to "2011", "10", and "18" respectively. To the right of the date is a "Time:" field with two input boxes, the first of which is empty and the second is "00". Below the date field is a "Logbook Responsible" label followed by a text input box. Red asterisks (*) are placed to the right of the date, time, and responsible fields. At the bottom right are "Save" and "Cancel" buttons.

Figure 62, Final delivery

Clicking the "Send" button (in the "Overview window") sends the logbook to the Fishery authorities but until a final delivery has been entered; the logbook remains open for further editing.

In order to create a new logbook for the next journey the current one must be closed by entering a final delivery. It is possible to create and transmit landing declarations for closed logbooks – see section 3.20 and section 3.15.

Final delivery details:

- Date and time of final delivery (press Ctrl+n to enter the current time)
- Logbook Responsible. The name of the person entering the logbook

3.17 Logbook Comments

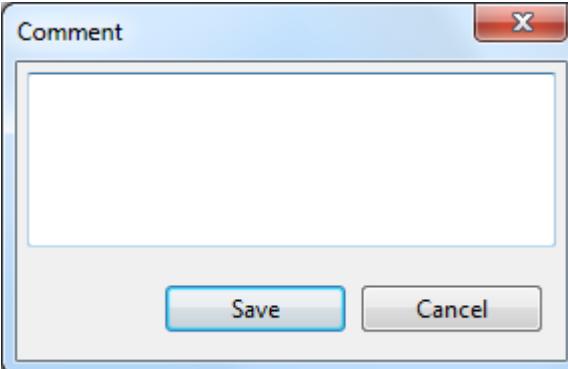

A dialog box titled "Comment" with a close button (X) in the top right corner. It features a large text area for entering a comment. At the bottom are "Save" and "Cancel" buttons.

Figure 63, Logbook comments window

You can add a textual comment to every main logbook entry you create: to do so, highlight the entry or any of its "children" in the Overview window and select the "Add comment" item on the "Edit" menu (alternatively, right-click the item in the Overview window). Select the "Remove comment" menu item to delete the comment.

3.18 Show logbook

The 'Show logbook' button (in the 'Overview window') displays the logbook in Web Browser (in HTML format), in a design emulating traditional paper logbooks.

Figure 64, Show Logbook

3.19 Sending Information to the Fishery Authorities

When you are saving information in vCatch everything is stored locally only. At any time during the journey, the detail lines in the 'Current Trip' tab of the 'Overview Window' may be transmitted to the Fishery Authorities to ensure timely reports.

The transmission status of the saved information is reflected in the marking to the left of each line in the 'Overview window' (see section 2.2.2)

In order to send information select 'Send' in the "Overview Window". Before the data is sent you may be notified about the size of the file you are about to transmit and you may be asked to confirm the transmission.

After your confirmation the data will be sent. The logbook will remain open for further editing.

To close the logbook a final delivery has to be entered before sending the logbook (select 'Final Delivery' in the 'Overview window').

3.20 Previous Logbooks (“Previous Trips” Tab)

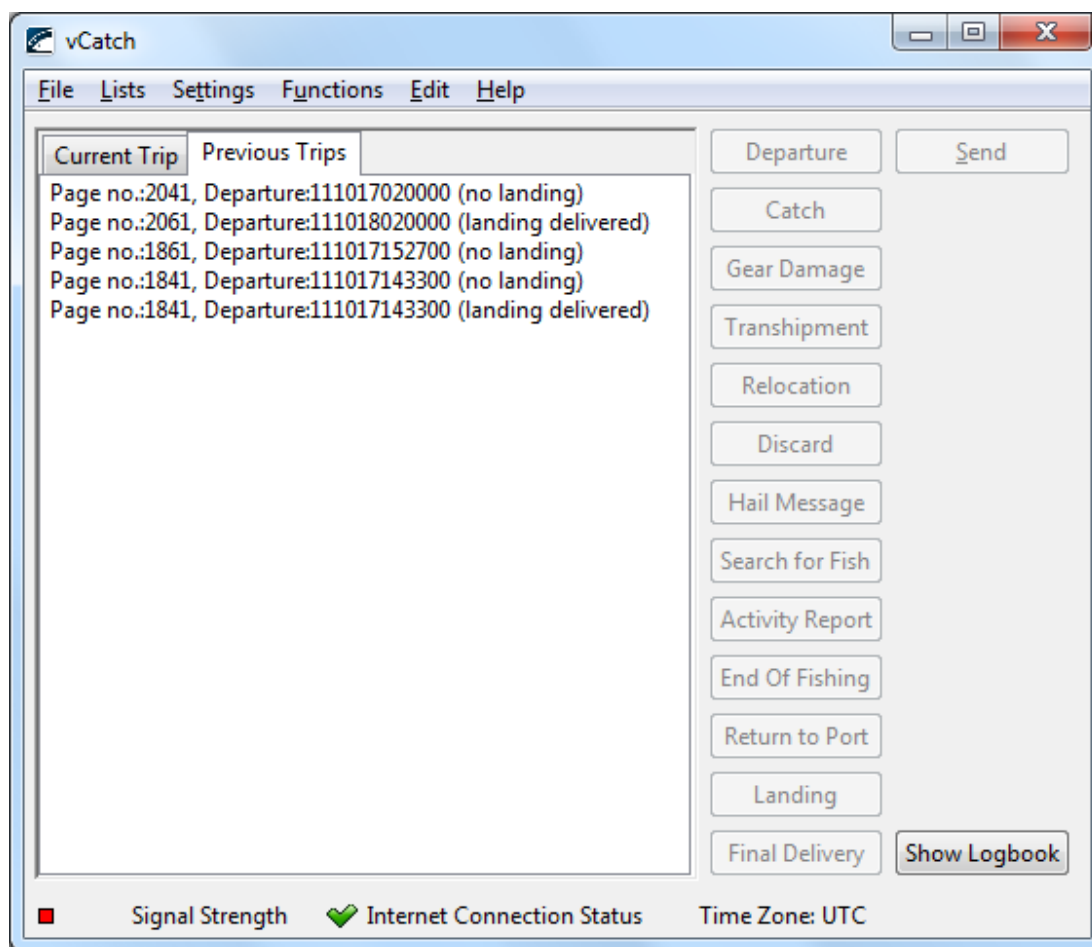

Figure 65 , Overview window with previous, incomplete logbooks

On the “Previous Trips” tab, a list of closed logbooks is shown. By a closed logbook is understood a logbook with a sent final delivery. By default closed logbooks from the last 48 hours are shown. This can be configured and your FMC might have chosen a different value.

Select a logbook by clicking on it in the list (or by navigating to it with the TAB and/or arrow keys). Click the “Landing” button to edit or add a landing declaration to the logbook; click the “Send” button to send the logbook to the FMC.

The closed logbooks can have different states which are indicated by their name. The states are; ‘no landing’, ‘unsent landing’, ‘landing sent’ and ‘landing delivered’. These states are explained in detail in the following.

- **No landing:** If landing information was not added to the logbook before the final delivery was sent, the logbook is initially in state ‘no landing’ in the list of closed logbooks.
For these logbooks with no landing it is possible to add a landing by selecting the logbook and click ‘Landing’ and then enter the landing information in the appearing landing dialog as specified in section 3.15. When the landing information has been entered, the logbook changes state to ‘unsent landing’.
- **Unsent landing:** For logbooks with an unsent landing it is possible to edit the landing or send the landing by selecting the logbook and clicking either ‘Landing’ or ‘Send’. When ‘Send’ has been clicked the logbook changes state to ‘landing sent’.
- **Landing sent:** Logbooks in state Landing sent are waiting for a receipt from the fishing authority. When the receipt is received, the logbook will change state to ‘landing delivered’. It is possible to retry sending until the receipt has been received.

- **Landing delivered:** Logbooks in state 'landing delivered' are logbooks that either had landing information added before the final delivery was sent or logbooks that have had landing information added later and have received a receipt for this from the fishing authority. Logbooks in state 'landing delivered' cannot be sent or edited.

Logbooks in all states can be viewed by clicking 'Show logbook'.

4 Customizing vCatch

In addition to the lists of vessels, buyers, fishing gear etc. mentioned in section 2.3 Defining Initial Value Lists, vCatch provides options for you to customize the following lists:

- Species
- Nations
- FAO Codes (waters)
- Economical zones
- Condition (of catch)
- Hail messages

These customizations are optional but may be desirable - to e.g. reduce the number of species you have to choose from when logging a catch – as vCatch by default presents every item the system supports in these lists. By customizing the lists you can limit the selection to those items you expect to actually use and hide those you never expect to be relevant to you.

The species list opens in its own window; the nations, FAO Codes, economical zones, condition, and hail messages list are edited in the Standard Lists window, as indicated below.

4.1 Species

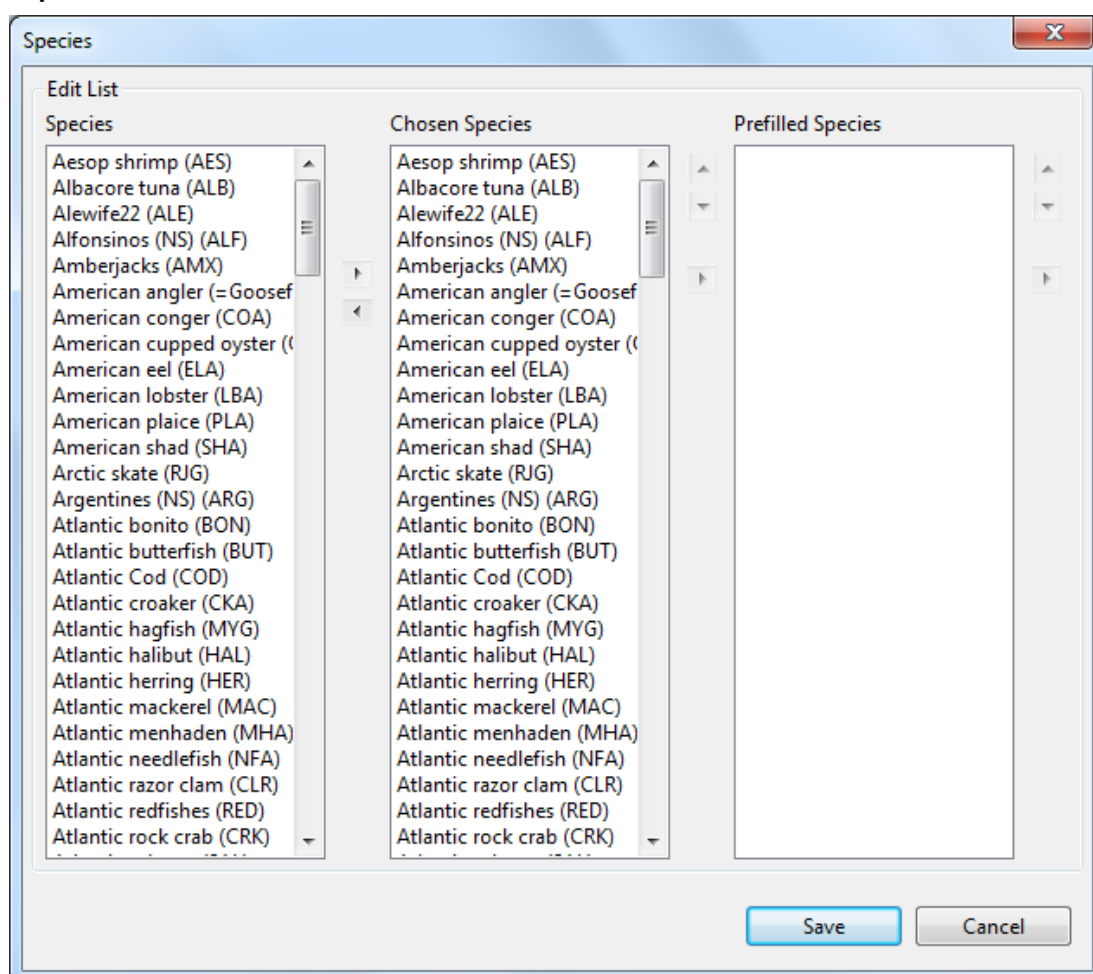

Figure 66, Species window

Selection of species is required for every logbook entry type that includes registration of catch details. To open the species window, select the “Species List” item in the “Lists” menu.

The window contains three lists that you may move items into or out of, and/or reorder, using the arrow buttons. The “Species” list contains every species the system knows of; the “Chosen species” list contains the subset of species that are made available for selection when registering a catch (this by default contains exactly same items as the “Species” list, but can be reduced using the arrow keys); the “Prefilled species” list contains a set of default species that are pre-filled by default when you create a new catch.

4.2 Standard Lists

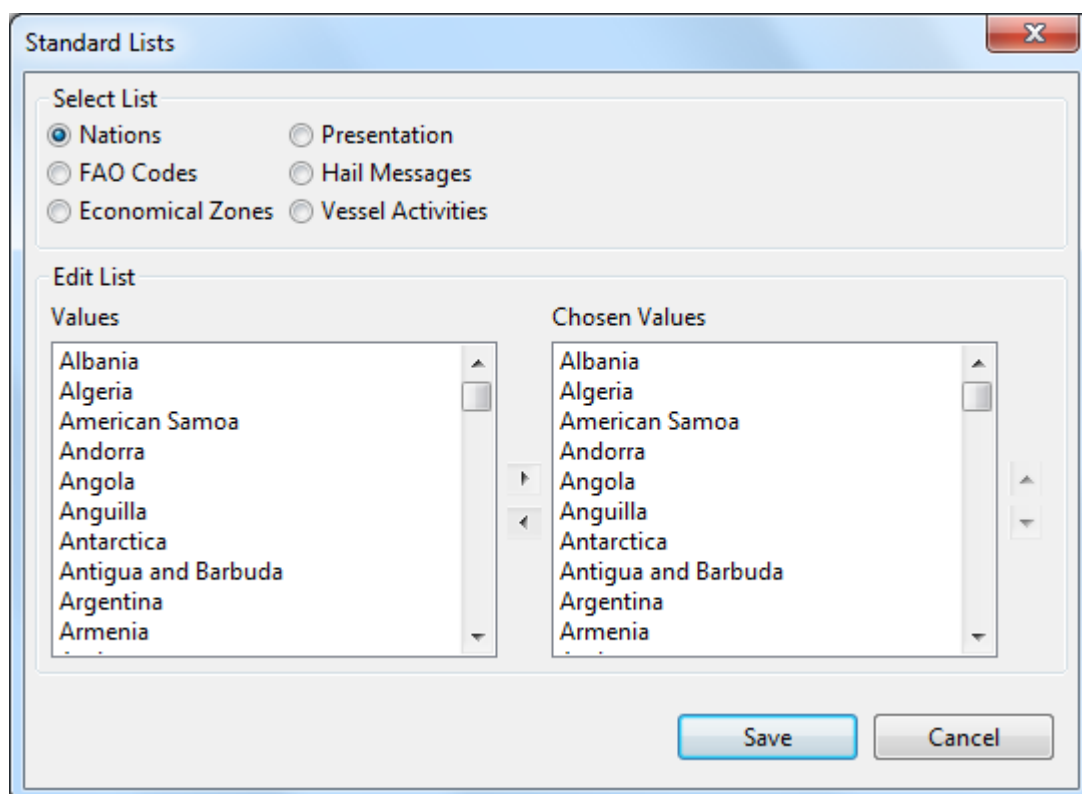

Figure 67, Standard lists window

To edit standard lists, open the “Standard Lists” item on the “Lists” menu then tick the type of list you wish to customize (the “Nations” list is selected by default). The “Edit list” pane presents two lists: to the left (“Values”) the total list of all items known by the system (e.g. every fishing nation on Earth); to the right (“Chosen values”) the selection from the total list that is currently displayed elsewhere in the system when you need to enter e.g. the condition of a catch.

To shorten the list of “Chosen values”, select one or more items in the list to the right (hold down the CTRL or SHIFT key while clicking to select multiple items), then click the left arrow. To add one or more items to “Chosen values” select the item(s) in the list to the right then click the right arrow. To reorder “Chosen values”, select an item in the list to the right, then click either the up or down arrow.

5 Setting System Preferences

5.1 Position Format

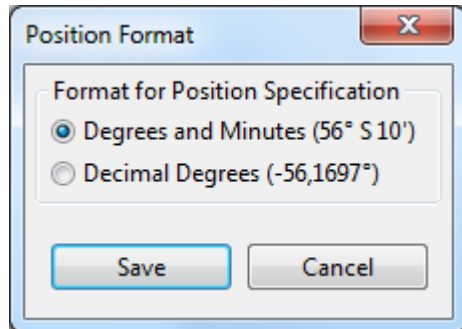

Figure 68, Position format window

In vCatch it is possible to enter positions either by entering degrees and minutes, or degrees and decimal minutes. Tick your preferred format to have vCatch use that format.

5.2 Communication

5.2.1 Communication channel

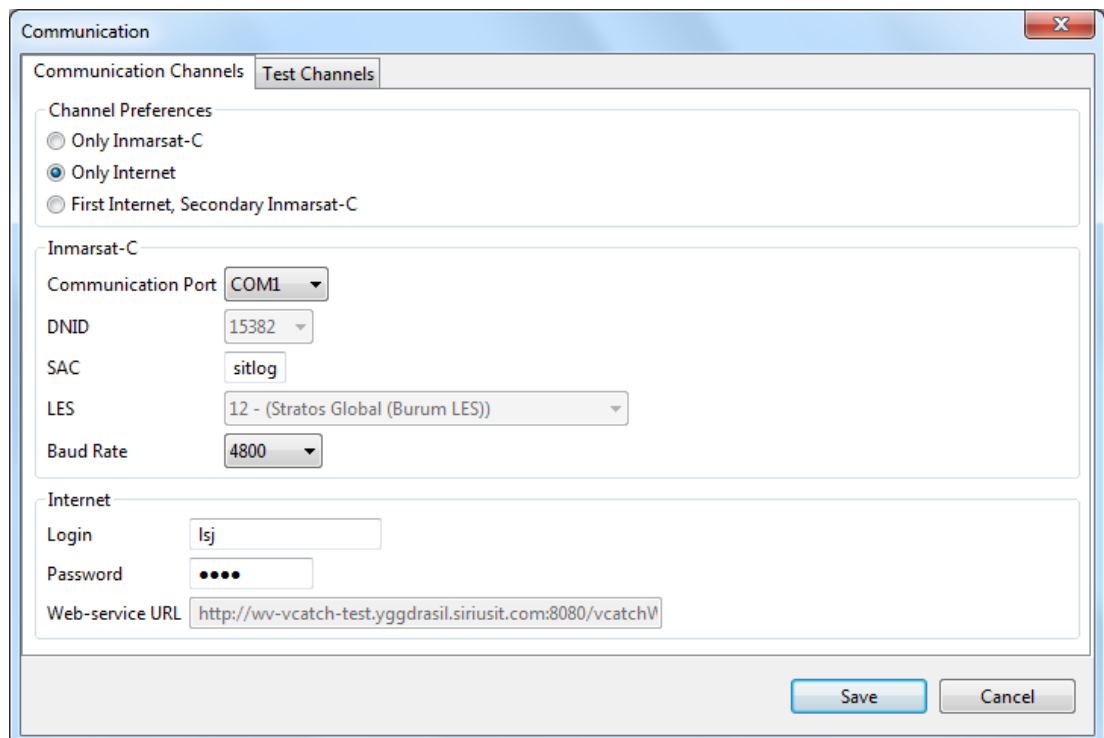

Figure 69, Communication Channels tab

Set the channel preferences by ticking the preferred choice. vCatch offers different options for communicating with the Fishery authorities:

- Only Inmarsat-C: vCatch only communicates via the transceiver.
- Only Internet: vCatch only communicates via internet
- First Internet, secondary Inmarsat-C: vCatch priorities internet communication over satellite. As long as internet communication is possible, vCatch will use internet. If internet communication is not accessible, vCatch will use satellite communication. If neither internet nor satellite communication is accessible, transmitting will stop and can be resumed later.

Furthermore you can inspect and change the Inmarsat-C settings, e.g. communication port, DNID, SAC, LES identification, and baud rate.

The baud rate used in the communication between the vessel client and the transceiver is default set to 4800 which can be changed in the transceiver. However as the client and transceiver must agree on this, it is possible to select the baud rate in the client.

If communication with the Fishery authorities is done via internet, you must specify a user login and a password. Contact your Fishery authorities to get a login and password, if you want to use internet.

5.2.2 Test of channels

Inmarsat-C	
Test	Result
Connection to transceiver	No connection
SAC	SAC
Server loopback test	No LES DNID specified

Test

Internet	
Test	Result
Internet connection available	Not tested
Server loop-back message	Not tested

Test

Save Cancel

Figure 70, Test Channels tab

On the 'Test Channels' tab it is possible to test the availability of the two communication channels (using the settings specified on the Communication Channel tab), i.e. Inmarsat-C and Internet.

For each test a detailed overview of both the progress and the results are presented. When the tab is first selected all test results display 'Not tested'. Then, when pressing one of the 'Test' buttons, the selected test will start with the first step, e.g. testing the connection between the PC and transceiver. In the above example (Figure 70) the PC is not connected to a transceiver as displayed.

If one step fails the remaining steps are not executed as this makes no sense.

5.3 Time Zones

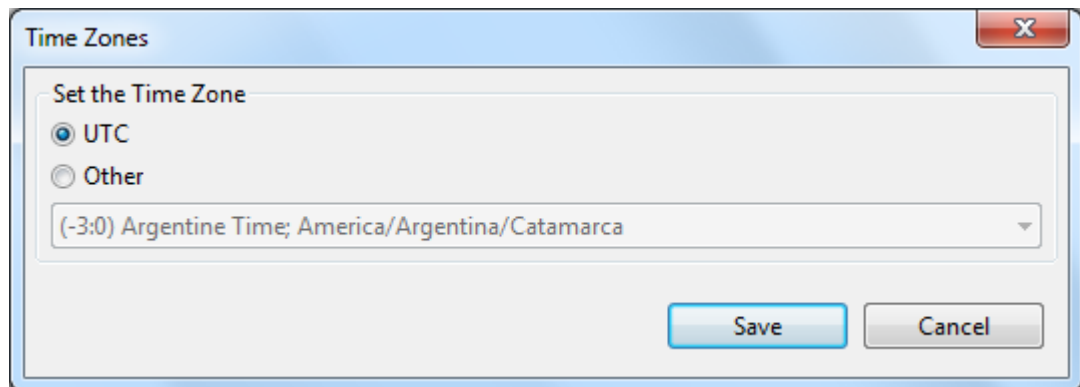

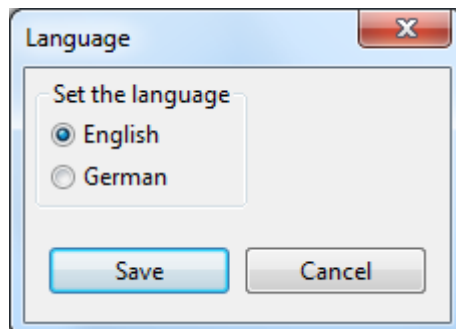

Figure 71, Time zones window

Timestamps in vCatch can be UTC (default) or if preferred any other time zone. Tick UTC to enter time in UTC time. Tick “Other” and choose a time zone in the drop down list. If time is entered in another time zone, it will be converted into UTC time when communicating with the Fishery authorities.

5.4 Language

To change the language of vCatch select “Language” in the Settings menu. Choose the relevant language and select the “Save” button.

Restart vCatch to activate the change of language.

5.5 Concurrent Catches Allowed

In the menu list “Settings” tick the “Concurrent catches allowed” if you want to be able to register from two catches at the same time.

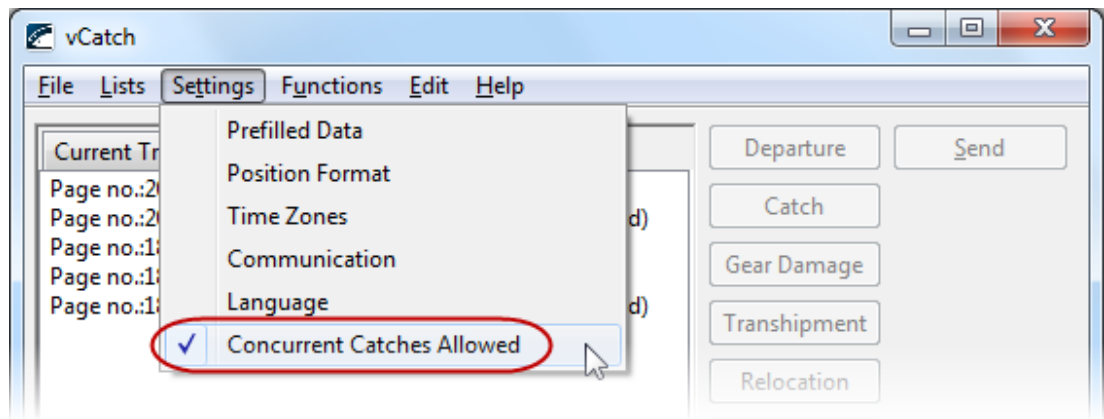

Figure 72, Concurrent Catches Allowed

When “Concurrent catches allowed” is ticked, the catch window has an extra button at the bottom: “New Catch”. Clicking this button switches between two open catch windows.

Figure 73, New Catch button on the Catch window

Always save the first catch first to have the correct sequence in the logbook window.

When the catches have been saved it is possible to send. Both catches will be sent at the same time. If each catch must be sent separately, they must be created separately.

To remove the possibility of concurrent catches untick “Concurrent catches allowed” in the menu list Settings.

6 Updating vCatch

Your Fishery authority can send updates to vCatch. The updates can be new versions of the standard lists (e.g. species, presentations, hail messages and many more) or new versions of the application.

6.1 Updating Lists

When new lists are available from your Fishery authority you will be notified in the status bar in the Overview window - this notification will appear from the moment where a receipt has been received from the Fishery authorities (green icons).

Figure 74, Notification of new lists ready for download

Before updating lists it is recommended to perform a backup as described in section 7.3.1

6.1.1 Update lists with download

You can get these list updates the next time a new logbook is created, Make sure you have a connection to the internet and select “Help”, “About vCatch”.

Figure 75, Help in vCatch

When the About box opens, click the “Download latest list version” button.

Figure 76, About vCatch box – Download latest list version

vCatch checks if new versions of lists are available and before the new lists are downloaded you may be notified about the size of the file and you may be asked to confirm that you will continue the download.

After your confirmation vCatch downloads the new list version and installs the new lists. Click “OK” when the application is finished downloading and installing. Close vCatch and start it again to activate the updates.

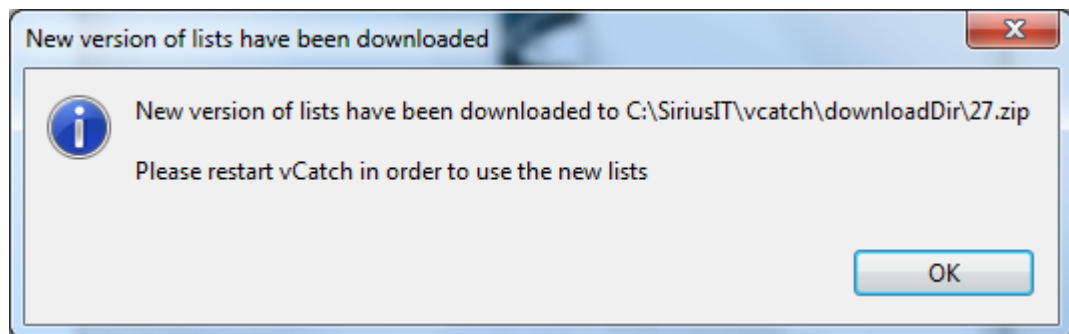

Figure 77, New versions have been downloaded

6.1.2 Update lists without download

You may receive a zip file with a new version of the lists from your FMC on other media like USB stick. Copy this zip file and paste it under the “DownloadDir” folder in the vCatch Destination directory.

Figure 78, “DownloadDir” folder

Restart vCatch to activate the updates.

6.2 Updating the vCatch Application

When new software is available from your Fishery authority you will be notified in the status bar in the Overview window - this notification will appear from the moment where a receipt has been received from the Fishery authorities (green icons).

Figure 79, Notification of new software ready for download

Before installing the new software version it is recommended to perform a backup as described in section 7.3.1.

6.2.1 Update software with download

To get the software update make sure you have a connection and select “Help”, “About vCatch”. When the About box opens, click the “Download latest client version” button (this is only possible if there is no logbook open).

Figure 80, About vCatch box- Download latest client version

vCatch checks if new versions are available and before a new software version is downloaded you may be notified about the size of the file and you may be asked to confirm that you will continue the download.

After your confirmation vCatch downloads the new version. The new version must be installed manually.

vCatch displays a progress indicator while the updates are being downloaded from the server.

Figure 81, Check Client Version progress indicator

When the download has successfully completed, vCatch displays a message detailing the download location on your local hard drive and providing instructions for how to complete the update.

Figure 82, New updates

Close vCatch and double click the vCatch-setup icon on your desktop as specified.
Follow the installation instructions and restart vCatch when the installation is complete.

6.2.2 Update software without download

You may receive a Software installer from your FMC on other media like USB stick.

Make sure there are no open logbooks and close the Vessel Client.

Double click the installer and follow the instructions. When installation is completed, restart vCatch.

7 Vessel Client Installation

If the vCatch Vessel Client has not yet been installed on your computer, you can follow this guide if you are confident in doing so.

7.1 System Requirements

It is recommended to have a computer with the following software installed:

Windows 7 .

The computer should have possibility to access the internet or to connect to an Inmarsat-C transceiver.

7.2 Vessel Client Installation

The file vcatch-setup.exe is delivered on a server for download, or distributed via CD's or memory sticks.

Make sure there is access to the vcatch-setup.exe file on the computer where the Vessel Client is to be installed.

Run the vcatch-setup.exe file from the destination computer.

Figure 83, Vessel Client Installer

Figure 83 shows the Vessel Client installer. Specify the desired destination folder and select Install to start the installation.

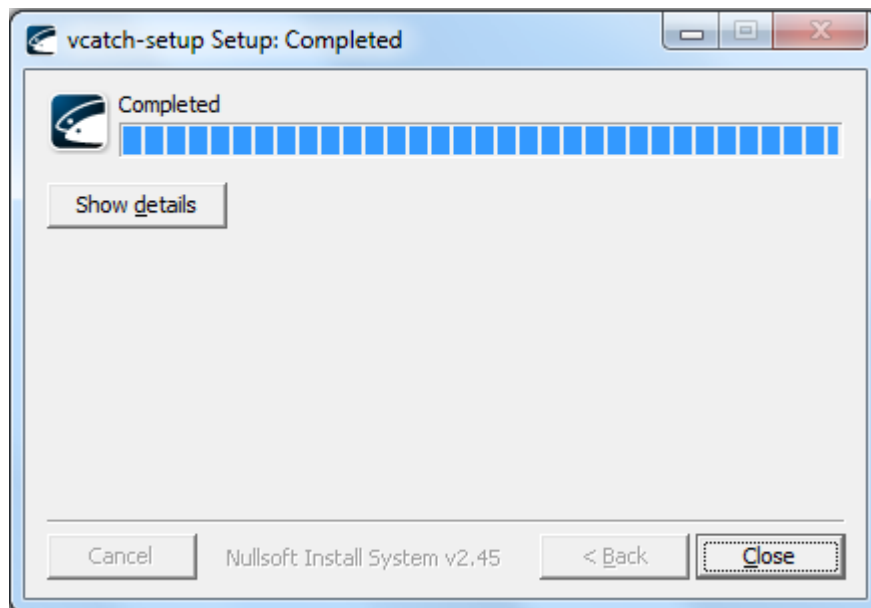

Figure 84, Installation completed

When the installation is completed, close the installer by selecting Close.

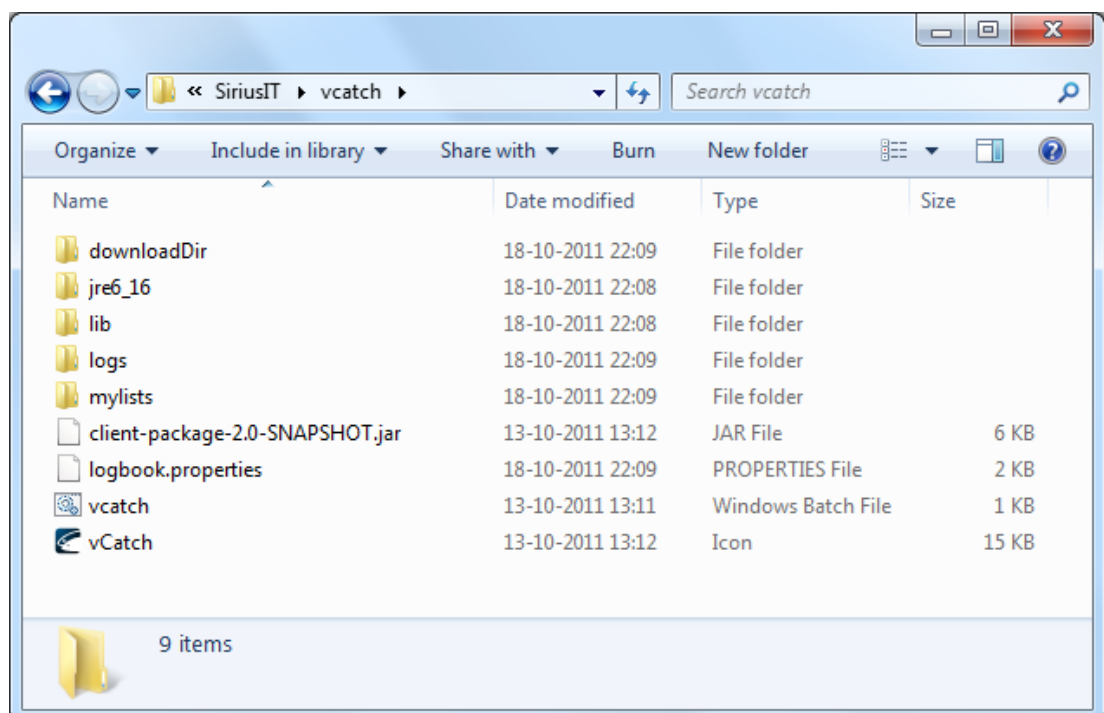

Figure 85, vCatch Destination directory

Browse to the destination directory specified in [Figure 83](#) and verify the content is as shown in [Figure 85](#).

7.3 Vessel Client Maintenance

7.3.1 Backup

In the following %INSTALLATION_DIR% refers to the directory where the Vessel Client was initially installed.

It is recommended to make a regular backup of the following

- %INSTALLATION_DIR%/certificate
- %INSTALLATION_DIR%/downloadDir
- %INSTALLATION_DIR%/logbooks
- %INSTALLATION_DIR%/mylists
- %INSTALLATION_DIR%/outbox
- %INSTALLATION_DIR%/Positions
